

## SOLUTIONS FOR PARENTS

We are fortunate to live in a community that knows the importance of education and provides transportation for our children to attend school. Many families rely on school buses, either out of necessity or convenience, and most are familiar with issues that are inherent with bus service. Spatial Net has developed the Automatic Vehicle Location (AVL) School Tracking System that can minimize or eliminate these issues.

- Parents can monitor, in \*real time\*, the exact location of the bus in the morning and decide when to send or drive their child to the bus stop.
- Parents can monitor the location of the bus in the afternoon and know when to arrive at the bus stop to pick up their child.
- Parents will have the ability to limit the amount of time a child spends at a bus stop.

Low subscription rate of \$25 per semester or \$50 per year (1 child/bus) \$50 per semester or \$100 per year (2 or more children/buses)

## SOLUTIONS FOR SCHOOLS

- Schools can monitor, in real time, bus locations and speeds to ensure safe driving.
- The system is a GIS mapping-based program which assists school systems with route and maintenance planning for maximum efficiency.
- Alerts schools of delays in service.

\*Real time is dependent on GPS coverage. The regular timing is set to update every ten seconds. Due to coverage problems it may sometimes be several minutes between updates.

*Because AVL / GIS is a dynamic and valuable investment that builds over time, our support is designed to fit long-term school safety needs.*

## Subscription

From Aug 2015 to May 2016
